Mar 25, 2013 According to a new study published in the journal Nature Neuroscience, our ability to select a particular concept in our memories was critical to evolve into humans. In general, we can assume that .Q: Searching a Dictionary to find keys whose values match a pattern I have a dictionary: d = {"941" : { "a": "1", "b": "2", "c": "3", "d": "4" }, "1842" : { "a": "1", "b": "2", "c": "3", "d": "4" }, "1942" : { "a": "1", "b": "2", "c": "3", "d": "4" }} How can I find all keys where the object has objects for both a and b, for example: I want the result to be {"1842": {}, "1942" : {}} A: You can use dict.get(): res = dict(d.get(k, {}).get(a, {}).get(b, {})) which is equivalent to: res = dict((d[k], {(a, b): d[k][a][b]})) (d[k] -> is the right key, {(a, b): d[k][a][b]} -> is the value of the key (so for key "941" and value {"a": "1", "b": "2", "c": "3", "d": "4"} it creates {941: {"a": "1", "b": "2", "c": "3", "d": "4"}}) Metabolic activation of methylated p-benzoquinone by human and rat hepatocytes. The hepatic microsomal cytochrome P-450 (P-450) is involved in the metabolism of reactive metabolites of toxic compounds that can lead to hepatic tumors. We have shown in the present study that the hepatocytes of male rats activated methylated p-benzoquinone [p-BQ, (1)], the metabolite of the chemical carcinogen p-benzoquinone [p-BQ], to a mutagenic metabolite, in the presence of the microsomal fraction isolated from the rat liver. On the other hand, the reaction was not observed in the presence of the microsomal fraction isolated from the rat liver or f678ea9f9e
